Date Object

The Date object works with dates and times.

Date objects are created with new Date().

There are four ways of instantiating (creating) a date:

Examples

```
new Date();

Try it Yourself »

new Date(milliseconds);

Try it Yourself »

new Date(dateString);
```

new Date(year, month, day, hours, minutes, seconds, milliseconds);

Try it Yourself »

The JavaScript Date Tutorial.

JavaScript Date Methods and Properties

Name	Description
constructor	Returns the function that created the Date object's prototype
getDate()	Returns the day of the month (from 1-31)
getDay()	Returns the day of the week (from 0-6)
getFullYear()	Returns the year
getHours()	Returns the hour (from 0-23)
<u>getMilliseconds()</u>	Returns the milliseconds (from 0-999)
getMinutes()	Returns the minutes (from 0-59)
getMonth()	Returns the month (from 0-11)
getSeconds()	Returns the seconds (from 0-59)
<u>getTime()</u>	Returns the number of milliseconds since midnight Jan 1 1970, and a specified date
getTimezoneOffset()	Returns the time difference between UTC time and local time, in minutes

HTML

CSS JAVASCRIPT

	time (nom 1 51)
getUTCDay()	Returns the day of the week, according to universal time (from 0-6)
<u>getUTCFullYear()</u>	Returns the year, according to universal time
getUTCHours()	Returns the hour, according to universal time (from 0-23)
<u>getUTCMilliseconds()</u>	Returns the milliseconds, according to universal time (from 0-999)
getUTCMinutes()	Returns the minutes, according to universal time (from 0-59)
getUTCMonth()	Returns the month, according to universal time (from 0-11)
<u>getUTCSeconds()</u>	Returns the seconds, according to universal time (from 0-59)
getYear()	Deprecated. Use the <u>getFullYear()</u> method instead
now()	Returns the number of milliseconds since midnight Jan 1, 1970
parse()	Parses a date string and returns the number of milliseconds since January 1, 1970
<u>prototype</u>	Allows you to add properties and methods to an object
setDate()	Sets the day of the month of a date object
setFullYear()	Sets the year of a date object
setHours()	Sets the hour of a date object
setMilliseconds()	Sets the milliseconds of a date object
setMinutes()	Set the minutes of a date object
setMonth()	Sets the month of a date object
setSeconds()	Sets the seconds of a date object
setTime()	Sets a date to a specified number of milliseconds after/before January 1, 1970

JAVASCRIPT

setUTCFullYear() Sets the year of a date object, according to universal time setUTCHours() Sets the hour of a date object, according to universal time setUTCMilliseconds() Sets the milliseconds of a date object, according to universal time setUTCMinutes() Set the minutes of a date object, according to universal time setUTCMonth() Sets the month of a date object, according to universal time setUTCSeconds() Set the seconds of a date object, according to universal time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead toISOString() Returns the date as a string, using the ISO standard toISOString() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string, according to universal time		universal time
time setUTCMilliseconds() Sets the milliseconds of a date object, according to universal time setUTCMinutes() Set the minutes of a date object, according to universal time setUTCMonth() Sets the month of a date object, according to universal time setYUTCSeconds() Set the seconds of a date object, according to universal time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toTimeString() Converts the time portion of a Date object to a string toTimeString() Converts a Date object to a string, according to universal	setUTCFullYear()	-
universal time setUTCMinutes(). Set the minutes of a date object, according to universal time setUTCMonth() Sets the month of a date object, according to universal time setUTCSeconds(). Set the seconds of a date object, according to universal time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead toISOString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string	setUTCHours()	-
time setUTCMonth() Sets the month of a date object, according to universal time setUTCSeconds() Set the seconds of a date object, according to universal time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead toISOString() Returns the date as a string, using the ISO standard toISON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	<u>setUTCMilliseconds()</u>	
setUTCSeconds() Set the seconds of a date object, according to universal time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead toISOString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	setUTCMinutes()	-
time setYear() Deprecated. Use the setFullYear() method instead toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead toISOString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	setUTCMonth()	
toDateString() Converts the date portion of a Date object into a readable string toGMTString() Deprecated. Use the toUTCString() method instead tolSOString() Returns the date as a string, using the ISO standard tolSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	setUTCSeconds()	, and the second
toGMTString() Deprecated. Use the toUTCString() method instead tolSOString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toTimeString() Converts a Date object to a string, according to universal	setYear()	Deprecated. Use the <u>setFullYear()</u> method instead
tolSOString() Returns the date as a string, using the ISO standard toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	toDateString()	•
toJSON() Returns the date as a string, formatted as a JSON date toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	toGMTString()	Deprecated. Use the toUTCString() method instead
toLocaleDateString() Returns the date portion of a Date object as a string, using locale conventions toLocaleTimeString() Returns the time portion of a Date object as a string, using locale conventions toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	tolSOString()	Returns the date as a string, using the ISO standard
using locale conventionstoLocaleTimeString()Returns the time portion of a Date object as a string, using locale conventionstoLocaleString()Converts a Date object to a string, using locale conventionstoString()Converts a Date object to a stringtoTimeString()Converts the time portion of a Date object to a stringtoUTCString()Converts a Date object to a string, according to universal	toJSON()	Returns the date as a string, formatted as a JSON date
toLocaleString() Converts a Date object to a string, using locale conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	toLocaleDateString()	
 conventions toString() Converts a Date object to a string toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal 	toLocaleTimeString()	
toTimeString() Converts the time portion of a Date object to a string toUTCString() Converts a Date object to a string, according to universal	toLocaleString()	
toUTCString() Converts a Date object to a string, according to universal	toString()	Converts a Date object to a string
	toTimeString()	Converts the time portion of a Date object to a string
	toUTCString()
